

VS Multi-lamellar NAD

Maximized anti-aging efficacy of NMN & NAD through a multi-lamellar structure

Designed with a multi-lamellar structure similar to the skin's lipid barrier, this advanced skin booster enhances active ingredient absorption, reinforces overall skin condition, and enables gradual, sustained release for stable, long-lasting anti-aging care.

Our skin barrier consists of a lipid layer with a **multi-lamellar** structure composed of ceramide, cholesterol, and fatty acids.

Using ingredients with a multi-lamellar structure similar to the skin's lipid layer can provide enhanced benefits for the skin.

Expected Benefits of Multi-Lamellar Structure for the Skin

- Enhanced absorption of active ingredients due to a multi-layered structure similar to the skin
- Strengthening of the skin barrier to block external harmful substances
- Inhibition of moisture loss, leading to improved and longer-lasting hydration
- Gradual release of active ingredients for stable delivery
- Prolonged moisturizing effect and reinforced skin barrier maintenance
