

CLAIReyes

# CLAIReyesSpecification

1.1ml\* 1 Syringe

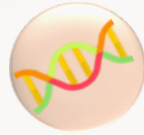

Polynucleotide 2mg/ml

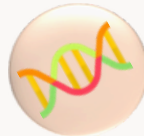

Oligopeptide-34

Sodium Chloride

Sodium Phosphate

Disodium Phosphate

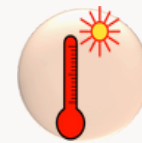

Water

Sodium DNA

3~4 treatments at intervals of 2~3 weeks

Room temperature

**CPNP Certified**

Same quality but more competitive price than Lumieyes

What is Polynucleotide?

Polynucleotide is a compound holding polymers of different length obtained from the silt of salmon

High Efficacy

Increase collagen expression and stimulate cell growth and angiogenesis.

Salmon

PN

Injection

Cell Activation

Increase proliferation and activity of different cells by acting in synergy with several growth factors, modulating cytokines and growth factor production, and influencing immunological response

# The Effects of **CLAIR**eyes
