

Lapiena Filler

A premium cross-linked hyaluronic acid filler range with lidocaine, designed to support everything from finer correction to deeper contour and structural shaping.

Cross-linked HA

Lidocaine 0.3%

20mg/mL HA

CE marked

Classic / Deep / Sub-Q

Lapiena Filler

The Collection

Lapiena is a tailored filler system: Classic for softer correction, Deep for fuller support in deeper folds, and Sub-Q for contour and structural shaping. The line uses advanced HCCL technology and pharmaceutical-grade hyaluronic acid to support stability, safety, and a natural-looking finish.

Classic

A softer option for finer lines and areas that benefit from lighter correction and definition.

Deep

Built for deeper folds and visible volume support where stronger structure is needed.

Sub-Q

A shaping-focused option for contour, projection, and more structural support in larger areas.

TECHNOLOGY

Advanced HCCL technology supports reduced residual BDDE and a stable gel structure.

Lapiena Filler

QUALITY

The range uses pharmaceutical-grade hyaluronic acid and references FDA DMF and EDQM certifications at the brand range level.

COMFORT

All three variants are presented with lidocaine 0.3% to support a more comfortable treatment experience.

Specifications & Placement Focus

The Classic product page presents the full three-variant matrix side by side. This gives a useful summary of composition, concentration, packing, and the general placement focus of each option in the range.

Category	Classic	Deep	Sub-Q
Composition	Cross-linked HA Lidocaine 0.3%	Cross-linked HA Lidocaine 0.3%	Cross-linked HA Lidocaine 0.3%
HA Content	20mg/mL	20mg/mL	20mg/mL
Volume	1.0mL syringe	1.1mL syringe	1.1mL syringe
Packing	1 x syringe 1 x 27G needle 1 x 30G needle	1 x syringe 1 x 25G needle 1 x 27G needle	1 x syringe 1 x 25G needle 1 x 27G needle
Placement focus	Fine wrinkles, lips, under-eyes, cheekbone, nasolabial folds <small>Lapiena Filler</small>	Deep wrinkles, lips, forehead, temple, glabella, nasolabial folds	Nose bridge, nose tip, forehead, laugh lines, cheek, chin

Safety & Validation

The filler line is CE marked and includes clinical testing for nasolabial fold treatment. Clinical comparison work showed performance comparable to an FDA-approved reference product.

Evaluation used WSRS and GAIS over a 24-week follow-up period in a 68-patient study framework for nasolabial fold treatment.

Why It Stands Out

The range uses a stable 3D matrix structure and reduced residual BDDE through an extended cross-linking process. That is paired with a simple three-depth system covering softer correction, fuller support, and deeper contour work.

Across the line, the consistent HA concentration and lidocaine inclusion keep the collection unified while the depth profile does the real differentiating work.

Reference Summary

Use **Classic** for lighter correction, **Deep** for deeper fold support, and **Sub-Q** for contour and structure. Across the range, the consistent HA concentration and lidocaine inclusion make the line feel unified while the depth profile does the real differentiating work.
