

VS COLLAGENAD

VS COLLAGENAD

Elasticity and skin texture improvement with hydrolyzed collagen

Low-molecular-weight hydrolyzed collagen, optimized for absorption, combines with NMN & NAD to enhance skin firmness and help improve fine lines associated with aging.

COLLAGEN is primarily composed of collagen, one of the key structural components of the skin. Collagen is a protein that helps maintain skin firmness and elasticity. As we age, collagen production decreases, which can lead to sagging skin and the formation of wrinkles. By directly supplying collagen to the skin, this booster helps restore vitality and improve overall skin condition.

Types of Collagen

Atelocollagen: Increased safety by removing amino terminal regions that may trigger immune responses.

→ Formulated with a safe and balanced combination of collagen types.

Functions of Collagen

- Maintains and supports elasticity in the dermis layer
- Enhances moisture retention and improves skin texture
- Replenishes collagen lost due to natural aging
