

VS PNAD

VS PNAD

Skin regeneration and texture care with PN (Sodium DNA) derived from salmon DNA

PN (Sodium DNA), known for supporting cell regeneration, barrier reinforcement, and collagen induction, works synergistically with NMN & NAD to deliver regeneration-focused, anti-aging, soothing, and anti-inflammatory skin care.

PN (Polynucleotide) INCI NAME : Sodium DNA

Contains PN, the key ingredient from Rejuran Healer, this formulation helps repair damaged skin tissue and revitalizes aging skin.

SODIUM DNA (PN)

PN is a growth factor complex derived from salmon DNA, structurally similar to human skin, offering excellent biocompatibility and safety as a regenerative active ingredient.

It promotes cellular recovery and regeneration, effectively improving the skin's internal environment from the ground up.

- Promotes cell regeneration: aids repair and recovery of damaged skin tissue
- Strengthens skin barrier: enhances resistance to external irritants and improves moisture retention
- Stimulates collagen production: supports the formation of elastic fibers in the dermis
- Soothes and reduces inflammation: stabilizes sensitive skin and decreases skin troubles
- Improves skin tone: restores skin vitality and reduces minor pigmentation
