

DERMAL FILLER RANGE

## Tesoro Filler w/ Lido

A hyaluronic acid filler line created for contour, volume, and smoother-looking correction, with lidocaine built in for a more comfortable treatment experience.

HA filler

Lidocaine 0.3%

Fine, Deep, Sub-Q, Implant

Contour & volume support

Smooth, flexible finish

# Product Overview

Tesoro Filler w/ Lido is built for volume, contour, and smoother-looking correction while keeping the finish soft and wearable. The line uses hyaluronic acid for support and lidocaine for comfort, making it easier to shape different treatment goals within one family.

## What It Is

A filler range designed to address shape, structure, and visible volume loss without pushing the result into a stiff or overbuilt finish. The line is organized into different densities so placement can be matched to the area being treated.

That makes it a flexible option for definition, fold correction, and more supportive contour work across different depths.

## Where It Fits

The range is presented for common filler concerns such as smile lines, marionette lines, lip definition, corners of the mouth, tear trough support, and other moderate to deeper areas that need a cleaner-looking finish.

Comfort is supported by lidocaine already in the formula, which helps keep the treatment experience smoother from the start.

## CORE BASE

Hyaluronic acid with built-in lidocaine for comfort.

## RANGE

Fine, Deep, Sub-Q, and Implant options for different correction depths.

## LOOK

Shape and support with a smooth, flexible finish in motion.

# Variant Lineup

The Tesoro filler line is divided into four densities so the product choice can better match the treatment area and the amount of structure needed.

## Fine

Built for softer refinement, lighter contour work, and smaller areas where definition matters more than bulk.

**Formula:** HA 20mg/mL + Lidocaine 0.3%

**Sold unit:** 1 x syringe, 1.0mL

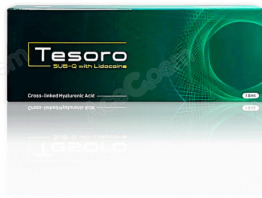

## Deep

Designed for fuller correction and stronger support in folds or areas that need a more structured result.

**Formula:** HA 20mg/mL + Lidocaine 0.3%

**Sold unit:** 1 x syringe, 1.0mL

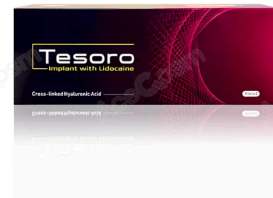

## Sub-Q

Created for areas that need broader volume support and a stronger contouring role while staying smooth through larger placement zones.

**Formula:** HA 20mg/mL + Lidocaine 0.3%

**Sold unit:** 1 x syringe, 1.0mL

## Implant

The strongest structure-focused option in the line, suited to areas that need more projection and a firmer supportive finish.

**Formula:** HA 24mg/mL + Lidocaine 0.3%

**Sold unit:** 1 x syringe, 1.1mL

# Use & Finish

Across the line, the emphasis stays on natural integration, flexible shaping, and treating different types of folds, contours, and volume loss with a more tailored fit.

## Common Focus Areas

- Smile lines and marionette lines
- Vertical lip lines and subtle lip enhancement
- Corners of the mouth and contour refinement
- Tear trough support and under-eye rejuvenation
- Areas that need more structural volume or smoother correction

## Natural Integration

The line is built around hyaluronic acid, which is already familiar to the skin. That helps the finish feel more natural and makes the range easier to adapt across lighter and stronger correction goals.

## Comfort Factor

Lidocaine is included in the formula, which supports a more comfortable injection experience and helps the line feel easier to work with across multiple treatment areas.

## Treatment Notes

The official product guidance presents the line as a mid-to-deep dermis filler family, with linear threading, tunneling, and serial puncture among the techniques referenced for placement.

### Technique Direction

- Placed according to the correction goal and defect depth
- Built for controlled volumetric correction without overcorrection
- Designed to support shape, folds, and volume loss with matched density options

### Care Notes

- Minor post-treatment redness or swelling may settle within about a week
- Heat, sun exposure, alcohol, aspirin, and strenuous exercise are commonly avoided for about 24 hours after treatment
- Careful injection technique remains essential to reduce vascular risk

BEAUTYR

Tesoro Filler w/ Lido

## At A Glance

Tesoro Filler w/ Lido is a hyaluronic acid filler range for contour, volume, and smoother correction, with different variants that let the level of support shift from lighter refinement to stronger structural shaping.

The line works best when the goal is to keep correction polished and wearable rather than rigid or overbuilt.

## Key Notes

**Type:** Hyaluronic acid filler with lidocaine

**Variants:** Fine, Deep, Sub-Q, Implant

**Lidocaine:** 0.3%

**Primary focus:** Shape, volume, contour, and smoother-looking correction

## Reference Summary

The Tesoro filler family gives a cleaner way to match filler density to the area being treated. Fine handles lighter refinement, Deep and Sub-Q step into stronger correction and support, and Implant carries the most structural weight for areas that need firmer projection.
